

# Here are some guidelines to help you finish your trip with a vehicle equipped with a "card / key" (or "box") in the glove compartment:

## Communauto vehicles

1

It is the USB key attached to the car key (rather than the car key itself) that must be inserted into the holder's USB port.

DO NOT FORCE IT. In the case of the USB key, it must be inserted the right way: the logo facing the indicator light. Otherwise, it just won't work...

## Auto-mobile vehicles

2

When it comes to Auto-mobile vehicles, the USB key is replaced by a jack (the tip is round rather than rectangular), but the principle remains the same.

3

Make sure that all the cards (there should be two) that were already present in the holder are still there at the end of your trip. Otherwise, you will not be able to end it, and the vehicle won't be available for the following user.

4

Make sure the doors are locked properly before leaving the vehicle.
